

## Services – Gutter Clear Overview

The Window Wash Company utilise SKYVAC industrial 'wet & dry' vacuums to clear gutters of leaf, moss and sand debris. Usually the work is carried out from the ground, using long carbon-fibre poles to reach high level gutters and valleys. Occasionally ladders are required if gutters have protective mesh or downpipe covers fitted. Remote cameras are used to ensure no debris is missed.

### Requirements:

- Power for SkyVac (we bring extension leads).
- Waste to be disposed in customer's 'green' bin or compost heap (we cannot remove waste from site).
- External water supply for rinsing through SkyVac.

Weather: Gutter clears can be carried out in wet weather conditions.
